

Let's Make a Paperweight Stone

Let's polish familiar stones and rocks, Let's make a stone paperweight.

Try taking advantage of variety of stone.

Materials

- Stone (Flat stone as possible)
- Waterproof sandpaper(No,100、 No,600、 No,1000)
- Concrete block
- Sand
- Powder for polishing metal
- Corrugated cardboard

How to Polish

When there are no flat surface

1

Moistened the sand and concrete by sprinkling water on it..

2

Move the rock back and forth and side to side to create a flat surface.

* Time varies depending on the type of the stone. Hard stone takes one hour.

How to complete

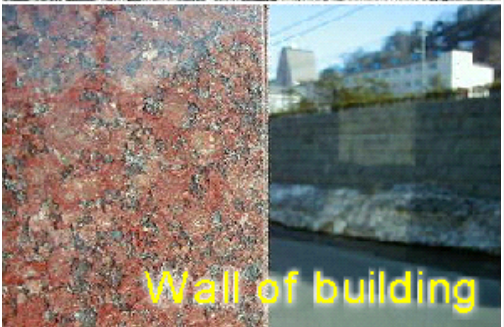

1

Using sand paper (No. 100), polish the stone until it become smooth..

2	<p>After it using sand paper No. 100, Use No. 600 to polish the stone more. Then use sand paper No. 1000 to polish it more. You can see the design of stone.</p>	
3	<p>Put a little powder for polishing metal on the corrugated cardboard and polish the stone. Finally, wipe them with dry cloth.</p>	
4	<p>Wash the stone well. * It takes 3 hours.</p>	

✿Let's make a map of the rock ✿

<p>There are many kind of stone in the department stores, hotel and bank. What kind of stone can you see? Let's sort them and make the map.</p> <p>Let's put the stone in the box and make a rock sample.</p>	 
---	---

 **Information**

♥ Stones can separate can be igneous (made by magma), a sedimentary rock (gather the mud, sand, and a small stone), and a metamorphic rock (igneous and sedimentary rock are pressured and heated). These stones are called some names by structure and what the stone includes.
